

## Flugenska 1 – Aviation English 1

### *Undirbúningsnámskeið á netinu án afskipta kennara*

This course is designed to support you in developing a strong Aircraft Mechanic English vocabulary, as well as improving your overall English levels - be that through reading, writing or listening in English. The technical vocabulary introduces you to terms related to the aircraft itself, flight, aerodromes and phrases used within the aviation environment.

The course is based around various forms of reading and listening materials along with exercises that allow you to both learn and test your knowledge.

This course can be used **before**, **during** and **after** formal studies in Aircraft Mechanics - by taking it before you begin your studies you will get a "feel" for aviation English, whereas if you work on this course during or after your studies you will have a better foundation as to what the terminology means. Equally, you do not have to take this course in a particular order. Often, it is best to choose a chapter that you have a particular interest in.

#### **Vocabulary: Flight**
